ACCESSORIES

New in 2026: ELBE Spray Adhesive – for quick and easy attachment of fleece

HIGHEST QUALITY

– from development to final inspection

In our in-house laboratory, new ideas and formulations for our PVC pool membranes are developed. Each mixture is first tested on a laboratory scale, optimized, and then tested in small test production on the large calender. Every batch undergoes strict quality tests: mechanical (tear strength, tensile strength, elongation), chemical (chlorine water, stains, weathering, UV, flame resistance), and weldability. Raw materials are also tested before production. After production, a visual final inspection and standard testing are performed before the liners reach our customers. Our quality management system provides complete documentation, certification, and processing of complaints. This is how we guarantee long-lasting, reliable and high-quality swimming pool membranes that meet the highest standards.

ELBTAL PLASTICS GMBH & CO. KG

Trust. Reliability. Quality.

WE are a German company based in Coswig near Dresden. As one of the leading manufacturers of PVC membranes for industrial and leisure applications, we export to over 55 countries worldwide. The site has been producing artificial leather and coated fabrics since 1897. PVC soft film production began in 1954. Following a rebranding, Elbtal Plastics GmbH & Co. KG was founded in 2004. This allowed us to retain a great amount of our employees' expertise in systems engineering and working with PVC membrane. We have taken advantage of this knowledge gained from over 70 years of PVC membrane production. Through customer satisfaction and service, we strengthen trust in our brands.

Our sales office team in Coswig is much more than just a contact for product questions. Competent and committed, it supports our customers throughout the entire sales process – from individual consultation and precise offer preparation to coordination of delivery times. Even after delivery, we remain at your side: with careful follow-up

checks and support in case of any queries, we ensure that our customers are completely happy. This personal commitment and our proactive support are an essential part of the secret of our success and make working with ELBTAL Plastics uncomplicated and trustworthy.

Exclusive Pool Membranes

Under the ELBE Pool Surface brand, we manufacture special membranes for sealing swimming pools in the private and public sectors in German quality standards

High-quality swimming pond and pond membranes

TRAINING CENTER

Top quality requires first-class installation

Becoming a professional means learning from professionals. We offer training courses at our modern training center in Coswig. Here, you or your customers can learn all the necessary skills and knowledge for the professional installation of our fabric-reinforced swimming pool membranes from our experienced installation experts. Gain valuable insights during our factory tour, which includes a supporting program. To ensure that there is enough time for intensive learning and a lasting training effect, the number of participants is limited to 8 people per course. We will confirm your successful training with an official ELBE certified installer certificate at the end of the course.

ELBE Pool Surface® – Installation courses

Course duration: 3 days

Tuesday to Thursday | 8:00 AM – approx. 5:30 PM

Max. number of participants: 8 persons per course

Language: German, English

Location:

Elbtal Plastics GmbH & Co. KG
Cowaplast 2 | 01640 Coswig | Germany

Info & dates: www.ELBEpools.com

Registration: trainings@elbtal-plastics.de

Phone: +49 3523 5330-0

Required materials: work clothes, safety shoes, knee pads, protective gloves if needed

ELBE POOL SURFACE

Flexible, long-lasting pool membrane

ELBE Pool Surface is a high-quality, fabric-reinforced swimming pool membrane that easily fits any pool shape. Two flexible PVC-P layers, connected by a resistant polyester mesh, ensure a watertight and long-lasting seal for your swimming pool. Thanks to its combination of stability, flexibility, and attractive design, ELBE Pool Surface is not only practical, but also visually upgrades any swimming pool. Long-lasting, easy to work with, and of the highest quality, our membrane is the reliable choice for private and commercial pools. Our swimming pool membranes with protective coating offer additional protection against external factors such as wear, dirt, and sunlight.

Our **SOLID** and **UNIQUE** 3D films combine modern design with surface protection and innovative texturing. They achieve the highest slip resistance class C, ensuring maximum safety in your pool. With a material thickness of 1.8 mm, they also offer exceptional flexibility during installation – significantly easier to work with than many other, thicker products on the market.

All our films are/have...

According to EU standards for swimming pools

Our membranes meet the strict requirements of the European standard EN 15836 for maximum safety and quality in swimming pool construction.

Child-friendly in accordance with EN 71-3

The materials used comply with the toy standard EN 71-3 and are therefore especially safe for children.

Low fume emission during welding

Welding produces only minimal fume emission, guaranteeing a more pleasant and safer working environment.

15-year watertightness

We guarantee 15 years of waterproofing when installed correctly – for long-term safety and investment protection.

easy to clean

The smooth, stain-resistant surface makes cleaning very quick and easy.

chlorine resistant

Our membrane with refined surface provides extra protection against fading caused by chlorine.

scratch resistant

The robust surface is especially resistant to scratches and mechanical stress.

stain resistant

Thanks to a special surface coating, stains can be easily removed and hardly stick to the surface.

algae resistant

The membranes effectively block algae growth and keep pool walls clean for a long time.

UV-resistant

Our swimming pool membranes are highly UV-resistant and retain their color and material properties even when exposed to intense sunlight.

Further information on the product characteristics of the individual membranes can be found on page 51.

Spray adhesive for laying fleece
– fast, strong, clean

With the new ELBE Spray Adhesive, we offer the right accessory for professional installation. Instead of hard brushing, the innovative spray adhesive ensures significantly faster and easier processing. It adheres reliably, even to rough surfaces, can be individually dosed, and impresses with its clean application – ideal for laying protective fleece.

You can find more information in the catalog on p. 54.

public swimming pool construction

elite® is recommended for use in public swimming pool construction.

protection of the waterline

Unlike conventional pool surfaces, elite® remains clean with significantly less effort.

extremely UV-resistant

High-quality components ensure an extremely resistant membrane against UV radiation.

extremely chlorine resistant

The elite® surface reliably protects the membrane from discoloration and fading caused by chlorine.

extremely stain resistant

Surface finish protects against unwanted discoloration.

extremely algae resistant

elite® prevents bacterial growth on the surface.

extremely easy to clean

The surface protects against stains caused by sunscreen and cosmetics, for example – without the need for aggressive cleaning agents.

easy to weld

Simple and clean installation with low smoke emission.

Phthalate-free, unicolor, and reinforced swimming pool membranes with exclusive finished surface

ELBE NATURAL SURFACE®

NATURAL POOL AND SWIMMING POND MEMBRANES

LIVING
IN AND WITH NATURE

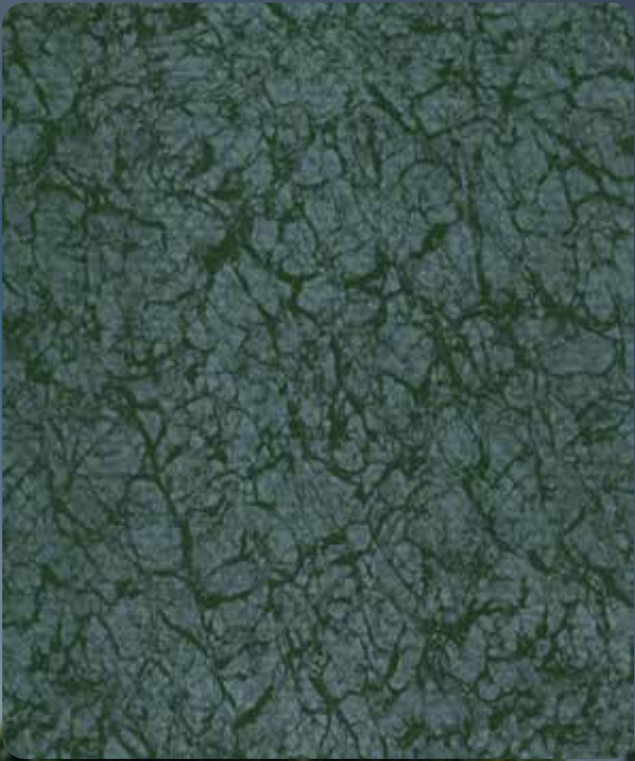

General care and maintenance instructions for natural and swimming pond membranes

- ELBE Natural Surface® pond membranes are suitable for natural water treatment (e.g. filtration)
- Regular maintenance prevents water contamination (e.g. by removing leaves and pollen)
- Rinse off cosmetics and sunscreen before entering the pond (to protect the biological balance)
- Easy and eco-friendly cleaning without chlorine-based products
- Clean with soft cloths or sponges

PVC pond membrane for ornamental fish tanks

Whether for breeding or keeping ornamental fish – such as koi carp, goldfish, or other species – our new PVC fish pond membrane is ideal for a wide range of decorative and breeding tanks. In fish farming, especially with sensitive species like koi carp, stable water parameters, hygienic conditions, and durable materials are essential. Our high-quality PVC membrane offers the ideal solution for fish breeding tanks: robust, flexible, and easy to clean.
Production and delivery upon request.

Please note: Our membranes for natural pools and swimming ponds are exclusively for the waterproofing of pools in which no chemical disinfectants based on chlorine or similar products are used.

ACCESSORIES

For professional installation of our swimming pool, natural pool and swimming pond membranes

Our ELBE Pool Surface® membranes are suitable for indoor and outdoor pool linings, regardless of the shape or size of the pool. This applies to new constructions, to the renovation of existing pools made of different concrete, masonry, wood, steel, aluminum, polyester supports as well as for earthen pools fixed on slopes up to 60 °.

Our ELBE Natural Surface® membranes are ideal for waterproofing ponds, swimming ponds and natural pools, easy and quick to install on any surface and support. Note, however, the importance of the right accessory during the installation, guaranteeing a perfect result.

NEW: ELBE Spray Adhesive – for fleece installation

Fast, strong, clean

Our innovative spray adhesive can replace conventional brush-on fleece adhesive and ensures significantly faster and easier application.

Your benefits:

- Pure time saving: Large-area bonding of protective fleece in no time.
- Strong adhesion: Long-lasting hold – even on rough and uneven surfaces such as concrete, screed, or tiles.
- Adjustable application: Thanks to a special nozzle with three spray levels (high / medium / low) for optimal control.
- Heat resistant: Temperature resistance up to +50 °C.

Application:

Shake the can well and spray from a distance of approx. 15–30 cm. The surface must be clean and dry. For porous substrates, apply adhesive on both sides. Depending on temperature and substrate, allow to flash off for approx. 10 minutes – once no threads form during the finger test, the adhesive is ready for installation.

Content: 750 ml • Ref. No.: 2001421

Fleece Adhesive – for safe and clean fleece installation

Our fleece adhesive is specifically developed for the reliable bonding of protective fleece to wall and floor surfaces in swimming pool areas. It ensures uniform adhesion and prevents the fleece from slipping during membrane installation.

Content: 5 kg • Package: 1 Unit • Ref. No.: 2100397

Spray Bottle for Seam Sealing

Our robust spray bottle with applicator nozzle enables precise and clean application of the seam sealing agent along the weld seams. The bottle is prefilled with the appropriate sealing agent and, thanks to its fine dosing tip, allows for the uniform creation of a visually appealing sealing line.

Content: 500 ml • Available from 1 piece • Ref. No.: 2100085

ELBE Seam Sealing Agent (NSM)

We recommend applying the ELBE Seam Sealing Agent to seal the seam transitions. The sealing agent does not replace the hot-air welding of swimming pool membranes; it serves to visually enhance and protect the welded seam. In addition, it helps reduce dirt accumulation along the welds. Please note that all seam sealing agents except Green, Dark Green, and Slate Grey contain biocides and are therefore only partially suitable for use in natural pools.

The matching seam sealing agent can be identified by the corresponding membrane color name or our product recommendation. Stirring and adding acetone can improve viscosity.

(Available only in full packaging units.)

Content: 950 ml per can • 6 cans per carton

Protective fleece for pool membranes – reliable substrate protection

To protect the pool membrane from mechanical damage and to prevent interactions with the substrate, we recommend using a high-quality protective fleece as a separating and protective layer. It is installed directly beneath the membrane and significantly contributes to the durability and appearance of the pool lining.

We offer two variants:

White Protective Fleece – economical solution

- Material: PES fleece, approx. 300 g/m²
- Thickness: 2 mm
- Color: white
- Fire protection: According to DIN 4102 B2
- Properties: Non-antibacterial – therefore particularly suitable for pools with controlled water quality or a low risk of stain formation
- Advantage: Cost-effective solution for many standard applications

1.5 m x 50 m Ref. No.: 2100358 | 2.0 m x 50 m Ref. No.: 2100061

6 rolls per pallet

Green Protective Fleece – with antibacterial properties

- Material: PES fleece, approx. 300 g/m²
- Thickness: 2 mm
- Color: Light Green
- Properties: Antibacterial finish to minimize stain formation on the membrane – ideal for demanding applications or natural pools.
- Advantage: Maximum protection against microbiological influences.

1.5 m x 50 m Ref. No.: 2001349 | 2.0 m x 50 m Ref. No.: 2001348

6 rolls per pallet

Suitable for: CLASSIC, SUPRA, PEARL

ELBE coated metal sheets and profiles for pool construction

Our high-quality coated metal sheet components ensure secure and durable fixation of swimming pool membranes along pool edges, corners, and stair areas. The steel sheets, laminated with

robust PVC membrane, serve as reliable carrier profiles for hot-air welding of the pool membrane – suitable for both new constructions and the renovation of existing pools.

Coated metal sheets	Sheet	Exterior angle	Interior angle	Strip
Color	Blue	Blue	Blue	Blue
Thickness	1.2 mm	1.2 mm	1.2 mm	1.2 mm
Dimensions	1000 x 2000 mm	50 x 50 x 2000 mm	50 x 50 x 2000 mm	50 x 2000 mm
Package	1 Pallet = 30 pcs	10 pcs	10 pcs	10 pcs
Ref. No.	2001301	2001302	2001305	2001306

PVC coated metal sheet

Ideal for custom-shaped pools or special installations. The panels can be easily cut and adjusted to ensure secure membrane anchoring even for irregular shapes.

PVC coated outer metal angle

These profiles are particularly suitable for new pool constructions or renovations with smooth surfaces where the upper pool edge can be removed. They are also used on the outer corners of steps and ensure precise membrane guidance across edges.

PVC coated inner metal angle

Designed for clean and stable membrane installation in internal corners – particularly in stair areas or complex pool shapes. They ensure a stress-free connection of the membrane in critical areas.

PVC coated metal strip

The ideal solution for pool renovations where the coping stones are to be preserved. The strips are installed beneath the coping and allow for clean, retroactive membrane anchoring without the need for extensive dismantling work.

Fastener rivets – secure fastening for composite sheet profiles

Our high-quality fastener rivets enable fast and reliable mechanical fastening of membrane composite sheets to the pool edge. Especially when used in combination with bent composite corner profiles, they ensure durable fixation of the swimming pool membrane and facilitate later sealing of the pool edge. The rivets are installed at intervals of approx. 25 cm and are ideal for both new constructions and renovation projects.

SHORT 4.8 x 20.3 mm | Content: 200 pcs • 12 packs per carton • Ref. No.: 2100275
LONG 4.8 x 35 mm | Content: je 100 pcs • 12 packs per carton • Ref. No.: 2100382

Plastic profile, welding strip, and liner locking stripe

Flexible membrane anchoring for new constructions and renovations

Our PVC hanging profiles offer a practical alternative to traditional fastening with composite sheet profiles. They enable secure and clean fixation of swimming pool membranes – both in new pool builds and during renovation projects

- Product variants:
- Horizontal rigid plastic profiles – for installation at the pool edge
 - Vertical rigid plastic profiles – for direct wall mounting

Application:
After installing the profile, a 9 mm wide welding stripe (available as an accessory) is welded to the back of the upper edge of the wall membrane. This acts as a wedge bead and is hooked into the hanging profile. An additional liner locking stripe securely holds the membrane in place, preventing it from slipping.

Plastic profile: Length 2 m • Available from 1 piece
Vertical Ref. No.: 2100286 | Horizontal Ref. No.: 2100387

Liner locking stripe: Length 30 m
10 rolls per carton • Ref. No.: 2100285
PVC welding strip: 9 mm x 25 m • Thickness: 1.5 mm
10 rolls per carton • Ref. No.: 2001317

Installation aids for easier application of fabric-reinforced swimming pool membranes

ELBE Thermo Glue – efficiency meets precision

Our innovative thermal adhesive revolutionizes membrane installation in pool construction – especially for complex shapes such as freeform stairs.

- Your benefits at a glance:
- Pure time saving: Particularly during stair installation and membrane-to-membrane welding – faster, easier, more efficient.
 - No metal sheet required: The membrane is bonded directly to the pool or stair surface – saving material and working time.
 - Ideal for welding strips: Base welding strips can be easily fixed – simplifying head-to-head welding considerably.
 - Also suitable for wet-on-wet applications: Reliable adhesion even under challenging conditions.
 - Versatile use: Also suitable for bonding membranes to slatted covers

Application:
Apply the adhesive to the substrate (pool/stair base or underlying membrane/ welding strip), allow to dry in air for 10–15 minutes – non-sticky. If needed, simply reactivate with heat from the hot-air gun and press the membrane into place. Processing should take place at ambient temperatures above +5 °C; the optimal range is between 18 °C and 25 °C.
Content: 4.5 kg • Available from 1 piece • Ref. No.: 2001329

Lane marking strips

The black lane marking strips (25 cm x 25 m) are welded directly onto the pool membrane and provide reliable lane markings in competition and training pools. They are UV-stabilized, resistant to cold and weather conditions, and feature an antimicrobial finish.
Thickness: 1.5 mm • Available from 1 roll
Ref. No.: 2001319

Welding base strips – for nearly invisible seam connections

Our PVC-P welding base strips (15 cm x 25 m) enable particularly discreet and visually refined seam connections in pool floor areas. Thanks to the special welding technique — with butted fleece joints and double-sided welding of the floor membranes onto the base strip — almost invisible seams are achieved, ideal for areas where conventional overlaps would be visually noticeable. A 150 mm wide welding base strip is bonded to the pool floor in the seam area. The two membrane sheets are each welded halfway onto the strip using tack and sealing welds. When applied correctly, additional seam sealing is not required.
Thickness: 1.5 mm • Available from 1 roll
Ref. No.: 2001318

Solvent welding agent

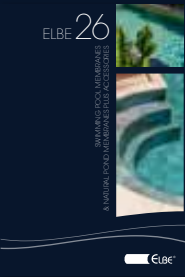

Our solvent welding agent (THF) is suitable for heat-free welding in seam areas, for example with pond membranes. Simply coat both sides, allow to partially dry, and then press firmly together for 1–5 minutes. Best processing results are achieved at temperatures above 15 °C.
Content: 1000 ml • 6 pcs per pack • Ref. No.: 2100039

BROCHURES & SAMPLES

Catalogues & Brochures

CATALOGUE #2200008
Includes the complete range of ELBE Pool Surface® and ELBE Natural Surface® products, as well as general product information, article numbers, and ordering details.
Format: DIN A4

Care Instructions #2200023
Guidelines and recommendations for the care of ELBE Pool Surface® fabric-reinforced swimming pool membranes.
Format: DIN A6

Sample brochures

elite® #2200014
Detailed explanations of the advantages of elite®. Includes general product information and warranty details. Illustrated and equipped with elite® membrane samples.
Format: DIN A4

SOLID & UNIQUE #2200041
Sample folder – illustrated and equipped with membrane samples from the Solid and Unique series.
Format: DIN A4

PEARL + SUPRA PRINT #2200044
Illustrated and equipped with membrane samples from the PEARL and SUPRA Print series.
Format: DIN A4
